

Population dynamics

Across

9. short life span, or to reproduce rapidly

10. does not matter how large or how small the population is, such as a volcanic eruption

11. on a graph, showing in a new environment a population increasing

12. group of individuals of the same species living in an area

Down

1. the maximum population size an environment can support for a long period of time

2. to mature slowly

3. increase of population in each generation

4. organisms moving out of an area

5. depends on how many organisms in an area, such as a disease

6. organisms moving to an area

7. resources that confine the growth of a population

8. In a graph, a pattern showing a slow growth of a population
