

Precal Vocabulary

Across

- 2. A line segment joining any two points on the circle.
- 4. The lowest value of an item.
- 12. A parallelogram with adjacent sides equal.
- 13. A polygon that has eight sides.
- 14. A polygon that has five sides.
- 16. A polygon that has four sides.
- 19. (in a system of coordinates) the x -coordinate, the distance from a point to the vertical or y -axis measured parallel to the horizontal or x -axis.
- 23. Two angles of a polygon with a common side.

- 24. A polygon that has six sides.
- 25. Of a triangle are the three points that form the triangle

Down

- 1. Parallel to level ground.
- 3. The line segment joining two non-adjacent vertices in a quadrilateral.
- 5. An angle containing 90 degrees.
- 6. A quadrilateral whose angles are right angles.
- 7. The likelihood of something happening.
- 8. The sides of a right triangle adjacent to the right angle.

- 9. A rectangular prism whose six faces are squares.
- 10. the magnitude of a real number without regard to its sign.
- 11. The side of a triangle to which the altitude is drawn.
- 15. A segment or piece of a curve.
- 17. Any number that is a rational number or an irrational number.
- 18. See exponent.
- 20. A triangle that has three unequal sides.
- 21. Having a value greater than zero
- 22. direct or incline at an angle.
