# Prenatal Development Test

## Across

3. Months 7-9, baby puts on weight; usually 1/2 lb. a week

4. The name given to the fertilized ovum until eight weeks after conception.

5. The lower portion of the uterus which extends into the vagina.

8. A doctor who specializes in care of women during pregnancy and childbirth.

9. Fine hairs present on the body of a fetus.

11. The name given to the baby in the womb from eight weeks until birth.

13. Pregnancy is divided into 3 periods. Each period lasts between 12 and 14 weeks, or about three months.

15. A prenatal test in which a small amount of amniotic fluid is removed for analysis.

16. A type of anesthesia used to relieve pain during delivery. The catheter is placed in the epidural space in the vertebra area in the mother's back.

## Down

1. An invasive prenatal test that looks for genetic abnormalities by sampling a piece of the placenta. Usually done at 10 to 12 weeks' gestation.

2. Months 1-3, baby forms; morning sickness is common

6. Spontaneous ending of the pregnancy prior to 24 weeks' gestation.

7. Months 4-6, baby gets longer; easier time for mom

10. The female reproductive organ that contains and nourishes a fetus from implantation until birth. Also called the womb.

12. A structure in the pregnant uterus for nourishing a fetus with the mother's blood supply; formed from the uterine lining and embryonic membranes.

14. A white, sticky substance that covers the fetus in the uterus.
