

Properties of Matter

Across

2. When put in water, copper sulfate mixes well and you don't see the solid.
7. Tool used to measure 10mL of water
9. Aluminum is very shiny and used to reflect heat when cooking.
10. Chlorine is green gas.
11. The smallest part of matter that still has its properties.

13. Diamonds are made of carbon atoms arranged as large crystals

14. Element that has atomic number 8.

Down

1. The element with the chemical symbol Ag
3. Only element with no neutrons in its nucleus
4. Sulfur has a strong, distinct smell.

5. Name of the paper used to separate a what was dissolved from what was not dissolved.

6. The positive particles in an atom

8. The number of hydrogen atoms in a molecule of water.

12. Iron will move toward a bar magnet while Nickel with not.
