

Name: \_\_\_\_\_ Date: \_\_\_\_\_

# Psych cross word puzzle Aiden McClung

## Across

2. The \_\_\_\_\_ is a framework used by cognitive psychologists to explain and describe mental processes. The model likens the thinking process to how a computer works. Just like a computer, the human mind takes in information, organizes and stores it to be retrieved at a later time.

4. A \_\_\_\_\_, or frame network is a knowledge base that represents semantic relations between concepts in a network.

5. An \_\_\_\_\_ is one of two types of long-term human memory. These types of memories are formed and used unconsciously and they affect both our thought and behaviors.

6. \_\_\_\_\_ is a principle that states that human memories are more easily retrieved if external conditions (emotional cues) at the time of retrieval are similar to those in existence at the time the memory was stored.

9. \_\_\_\_\_ is a limited capacity store for retaining information for a brief period while performing mental operations on that information.

11. \_\_\_\_\_ is the theory that by rehearsing and repeating individual items, they will remain fresh in your short-term memory which will then move into the long-term

13. The \_\_\_\_\_ Model is a relatively new model regarding the processes of memory.

15. \_\_\_\_\_ is the visual sensory memory register pertaining to the visual domain and a fast-decaying store of visual information.

16. \_\_\_\_\_ is the sensory memory that register specific to auditory information (sounds). Once an auditory stimulus is heard, it is stored in memory so that it can be processed and understood.

17. The \_\_\_\_\_ model, describes memory recall of stimuli as a function of the depth of mental processing.

18. \_\_\_\_\_ is a memory-related term that refers to the ability to retain information in the brain

19. \_\_\_\_\_ refers to very short-term memories about perceptions of the world through the five senses of sight, hearing, smell, touch, and taste.

20. \_\_\_\_\_ is the process in which information in your memory can be recalled.

21. \_\_\_\_\_ is the process of focusing on a particular object in the environment for a certain period of time. Attention is a limited resource, so \_\_\_\_\_ allows us to tune out unimportant details and focus on what matters.

## Down

1. \_\_\_\_\_ is the faculty of the brain by which data or information is encoded, stored, and retrieved when needed.

3. \_\_\_\_\_ refers to general world knowledge that we have accumulated throughout our lives.

7. \_\_\_\_\_ is a memory technique that involves thinking about the meaning of the term to be remembered, as opposed to simply repeating the word to yourself over and over.

8. \_\_\_\_\_ is the stage of the Atkinson-Shiffrin memory model where informative knowledge is held indefinitely.

10. \_\_\_\_\_ also known as declarative memory is a type of long-term memory in which we store memories of fact.

12. \_\_\_\_\_ allows a perceived item of use or interest to be converted into a construct that can be stored within the brain and recalled later from long-term memory.

14. \_\_\_\_\_ is the information that a person is currently thinking about or is aware of. It is also called primary or active memory.
