

Quadrilaterals

Across

2. An angle formed by the extending of a side, adding these together will always equal 360 degrees

6. A figure with two pairs of congruent opposite sides, its diagonals are congruent, all of its angles are right angles.

10. A quadrilateral not a parallelogram, has only one pair of parallel sides.

12. Angles that add up to 180 degrees

13. A parallelogram with 4 congruent sides, 2 pairs of congruent opposite angles, its diagonals are perpendicular to each other, each diagonal bisects a pair of opposite angles.

14. When 2 lines never meet they are.....

15. When 2 things measures are the same

Down

1. A trapezoid with legs that are congruent

3. A figure where both pairs of opposite sides are parallel

4. The angle on the inside of a figure

5. 2 lines that come together to form a right angle

7. All of this quadrilaterals sides, <'s, and diagonals are congruent, all of its angles are right angles

8. A quadrilateral with 2 pairs of consecutive congruent sides and no opposite congruent sides, no parallel sides

9. A line which cuts another line segment into two equal parts

11. The lines connecting two opposite angles together is a....
