# Regions of The Brain

## Across

3. lobe dealing with voluntary motor function, mood, and smell  
 7. made of two hemispheres with convoluted surfaces  
 8. part of diencephalon located under thalamus capping the brainstem. Main visceral control center, important to homeostasis  
 10. lobe dealing with integration of visual input  
 11. composed mostly of tracts of nerve fibers

12. sorting, editing, and crude recognition of sensation part of the diencephalon

13. layer of cerebrum known as white matter, myelinated nerve tracts

14. layer of cerebrum with grey matter and no myelin sheath

## Down

1. inferior and merges into spinal chord

2. internal island of grey matter in inferior cerebrum, diencephalon, and midbrain

4. lobe dealing with olfactory and auditory input, memory, and judgment

5. lobe dealing with reception and evaluation of sensory info EXCEPT smell, hearing, and vision

6. part of diencephalon that houses the pineal gland

9. involved in control of breathing
