

Name: _____

Date: _____

Renewable and Non-renewable Resources

Across

- 5. the space, conditions, and all living and nonliving things around an organism
- 6. a source of energy
- 9. a power plant that uses the energy of falling water to turn the turbines that power its generator
- 10. materials from Earth that cannot be replaced within a reasonable amount of time, such as oil, coal, and natural gas
- 11. a power plant that burns a fossil fuel (such as coal, natural gas, etc.) to produce steam that turns the turbines that power its generator

Down

- 1. machines with blades attached to a shaft
- 2. a power plant that uses the energy of wind to turn the turbines that power its generator
- 3. a place where a large generator transforms energy of motion into electrical energy
- 4. a resource that nature can replace
- 7. a machine that changes the energy of motion into electrical energy
- 8. sources not made by humans
