

Renewable and nonrenewable sources

Across

- 3. Energy produced from water.
- 4. Energy source still in development.
- 6. Produces electricity chemically with hydrogen fuel and oxygen.
- 8. Energy from the sun to heat something directly.
- 9. Oil pumped from the ground, also known as crude oil .

11. Energy from heat in the Earth's crust.

12. Saving energy.

13. Remains of ancient organisms that change into coal.

14. Collectors used to heat water or a building sun energy .

15. Energy put in a system that does useful work.

Down

1. Converts mechanical energy into electrical energy.

2. Warm surface water used to boil sea water.

5. Energy source created from organic matter.

7. Oil deposits extracted at current prices using current technology.

10. Energy from sources constantly being formed.
