

Name: _____

Date: _____

Restorative Art

1. broad muscle covers the top of the skull, occipitalis: back part, frontalis: front part. Causes eyebrows to raise and wrinkles to form on forehead
 2. broad muscle arising in temporal cavity and inserting in the mandible. Mastication and is strongest chewing muscle, closes the mandible and side to side movement
 3. muscle arising from the zygomatic arch and inserting in the mandible. Mastication, closes the mandible
 4. sphincter muscle that surrounds the eye socket. Closes the eyelid and compresses lacrimal sac
 5. pyramid shaped muscle, lies beneath the frontalis and orbicularis oculi, FROWNING muscle. Draws eyebrows inferiorly and medially
 6. inside of the eye socket to the superior tarsal plate of the eyelid. Raises the upper eyelid
 7. covers the bridge of the nose. Draws skin of the forehead inferiorly, causing transverse and vertical wrinkles in the forehead
 8. PUCKERING muscle, flat band of muscles in the upper and lower red lips and integumentary lips. Closes the lip, compresses lips. Shapes lips during speech
 9. facial expression. Raise the upper lip and dilates the nostrils
 10. facial expression. Elevates and extends the upper lip
 11. muscle at angle of mouth. Elevates angle of mouth
 12. muscle of face. upper lip superiorly and laterally
 13. LAUGHING muscle. extends from cheekbone to the angle of the mouth. draws upper lip posteriorly superiorly, and laterally
 14. TRUMPETERS muscle. Muscle of cheek, molar teeth inserts into the skin at the anguli oris (corners of the mouth). Compresses cheek, pulls the anguli oris posteriorly, action of sucking
 15. FALSE SMILING muscle. Masseter muscle to the corners of the mouth. Corners of mouth posteriorly
- A. depressor anguli oris
 - B. angulus oris eminence
 - C. philtrum
 - D. sternocleidomastoid/SCM
 - E. masseter
 - F. temporalis
 - G. levator labii alaeque nasi
 - H. risorius
 - I. Levator palpebrae superioris
 - J. levator anguli oris
 - K. orbicularis oris
 - L. depressor labii inferioris
 - M. platysma
 - N. mentalis
 - O. zygomaticus major

16. TRIANGULARIS. Arises from the mandible to insert into the anguli oris. Depresses angle of the mouth	P. corrugator
17. QUADRATUS. Facial expression. Depresses lower lip inferiorly and laterally	Q. orbicularis oculi
18. the tip of the chin. Elevates and protrudes the lower lip, wrinkles the skin over the chin	R. nasolabial fold
19. POUTING muscle. Covering the anterior neck. Wrinkles skin of neck and chest, depresses mandible and anguli oris	S. zygomaticus minor
20. thick muscle, head of sternum and clavicle, inserts at the mastoid process of the temporal bone. Rotates and depresses the head	T. procerus
21. double bellied muscle of the neck, attaches to mastoid process and mandible. Draws hyoid bone superiorly	U. nasal sulcus
22. vertical groove located medially on the upper lip between the columna nasi and the medial lobe of the mucous membrane of the upper lip	V. digastric
23. eminence/projection on the cheek adjacent to the corners of the mouth. Extends from superior part of the posterior margin of the wing of the nose to the side of the mouth	W. buccinator
24. angular area between the posterior margin of the wing of the nose and the nasolabial fold	X. occipitofrontalis/epicranium
25. shallow curving groove inferior to the medial corner of the eyelids	Y. levator labii superioris
26. small cone prominence lateral to the end of the line of lip closure	Z. oblique palpebral sulcus
