Rock Cycle Textbook Vocab

Across

3. Rapidly moving rocks sliding downward
 8. Soil and regolith slowly moving downward
 9. Soil and rock fragments with large amounts of water moving rapidly downward
 10. Small pieces of rock chipped away from physical forces
 13. When water freezes in the cracks of rock and expand causing the rock to break up into smaller pieces.

Down

1. Vertical section of soil that shows succession of horizons and the underlying parent material
 2. Large amount of rocks and loose sediments moving together among a curved surface
 4. When a mineral is changed by the internal structure having had the removal or addition of elements

5. Gravity causing a downward slope movement of regolith, rock and soil
 6. Layer of rock and minerals that cover most of Earth's surface
 7. Weathering caused by the reduction of pressure that lets sections of outer rock break off
 11. A group of rocks gathered at the bottom of a cliff
 12. Minerals, organic matter, air, and water combined to get the portion of the regolith layer that lets plants grow
