

Name: _____

Date: _____

Rock puzzle

Across

5. blows in storms

9. Remains of once living organisms.

10. a loose granular substance, typically pale yellowish brown, resulting from the erosion of siliceous and other rocks

12. Lithification is the process that turns sediment into rock.

13. a stiff, sticky fine-grained earth, typically yellow, red, or bluish-gray in color and often forming an impermeable layer in the soil.

14. One of the three main rock types formed through the cooling and solidification of magma or lava

15. Wear away or change the appearance or texture of a rock.

Down

1. the erosion or disintegration of rocks, building materials, etc., caused by chemical reactions

2. weakening and subsequent disintegration of rock by plants, animals and microbes. Growing plant roots can exert stress or pressure on rock.

3. Rocks made with mud

4. The process of eroding or being eroded by wind, water, or other natural agents.

6. pits (or tiny craters) created by falling rain.

7. Sediment is deposited when the energy of the transporting medium becomes too low to continue the transport process.

8. relating to sediment

11. colors of rock
