

Science

Across

2. Scientist who proposed Pangea
 7. two tectonic plates move towards each other
 9. two tectonic plates move away from each other
 12. number of oceans on earth
 13. dense and thin crust is called
 15. earth's surface covered by a layer of rock called this

16. the name of the supercontinent (when all continents fit together like a puzzle))

Down

1. the number of large plates there are
 3. your science teacher's last name
 4. name of the plate south of Florida
 5. when two tectonic plates slide past each other

6. these plates are large slabs of the earth
 8. the crust is part of the top layer called the
 10. name of the plate in the plate south of South America
 11. this causes the plates to move
 14. this crust is thick
