

Name: _____

Date: _____

Science

Across

- 1.** a group of atoms come together representing the smallest fundamental unit of a chemical compound that also can take part in a chemical reaction
- 3.** made up of lots of elements
- 6.** a group of chemical compounds and minerals
- 8.** he made up the periodic law and used it to correct the properties of some already discovered elements

11. this is a mix of things where the elements are individually distinct

12. a table which shows elements which have been put in order of atomic mass

Down

2. compound that combines sulfur with copper and the outcome of this kills bacteria

4. the smallest particle of a chemical element, which is possible

5. they cannot be changed and are also primary matters

7. explains the quality in which something reacts

9. a chemical element in which has the symbol Cu and the atomic number 29

10. they made the law of octaves and changed the periodic table into relative atomic mass
