

Name: _____ Date: _____ Period: _____

Science Crossword

Across

6. landform that forms from deposition of sediment carried by a river as the flow leaves its mouth

7. an area of low-lying ground adjacent to a river, formed mainly of river sediments and subject to flooding

8. the erosion or disintegration of rocks, building materials, etc., caused by chemical reactions rather than by mechanical processes

9. sediments, soil and rocks are added to a landform or land mass. Wind, ice, water, and gravity transport previously weathered surface material, which, at the loss of enough kinetic energy in the fluid, is deposited, building up layers of sediment.

10. a slowly moving mass or river of ice formed by the accumulation and compaction of snow on mountains or near the poles

Down

1. rocks, soil and minerals being slowly broken down or broken apart by the Earth's environment such as pressure, temperature, water and ice

2. a fluid or hardened stream or avalanche of mud

3. the process of eroding or being eroded by wind, water, or other natural agents

4. the sliding down of a mass of earth or rock from a mountain or cliff

5. wear away or change the appearance or texture of (something) by long exposure to the air
