

# Science Vocab Words

## Across

- 3. Can hold more heat than land
- 4. The difference in pressure between a high and low pressure flowing from a higher to a lower pressure
- 6. The atmosphere carries heated air up and drops cooler air towards Earth's surface.
- 7. Winds that affect a comparatively small area
- 10. When the air mass warms and becomes less dense rising above the Earth's surface

## Down

- 1. The effect of temperature and salinity
- 2. directed movement of water generated by a number of forces acting upon the water
- 5. Heat from the ocean rises up and pulls cooler air from the land
- 8. Energy released in the form of heat and cooler air moves in from the ocean
- 9. When air cools and becomes dense and sinks towards Earth's surface
