# Science Vocabulary

## Across

5. a clear object that lets all light through (glass)

8. when light goes through a substance & travels in a new direction

9. a substance that makes possible the transfer of energy from one location to another, especially through waves

10. the ability to do work or move something away

## Down

1. a tool that is used to change the direction that light is traveling in order to make objects appear closer & larger, or smaller & farther away

2. a type of radiant energy that travels outwardly in straight lines & can travel through empty space

3. letting some light through; objects cannot be clearly seen through a translucent object

4. a bouncing of light off a surface, such as a mirror

6. not letting light through (brick)

7. used to disperse white light & break it up into a spectrum of color (light refracts when it travels through a prism)
