

Science

Across

- 2.** When water evaporates from the ground AND plants in a area
- 4.** When water evaporates from plants
- 6.** Salt water
- 14.** Algae build up
- 16.** 3%
- 17.** When humans and other animals and cool themselves down (when it evaporates)

18. When water falls as rain,sleet,snow,hail (and freezing rain)

19. When we DONT know where the pollution is coming from

Down

1. Water flowing downhill on the surface of the earth

3. Water soaking into the ground to become groundwater

5. When we KNOW where the pollution is EXCATLY coming from

7. Turing a gas into a liquid

8. Happened when the ground cannot hold anymore water,this leads to more runoff

9. When runoff carries soil particles and dumps them into a nearby lake or stream

10. Turning a liquid into a gas

11. Fresh water

12. Largerest drinking water source

13. A solution with salt water

15. Allows things pass through it
