Across

3. When you separated particles from a suspension it is called...
 5. The Substance you put into the solvent to dissolve is called the...
 7. The tool used to measure temperature
 9. When you add more of the solvent into the solution it is called...
 10. When you cool a substance it will...
 12. When a substance blends into another, it..
 17. The state of matter where the attraction is very weak
 18. A way of removing a soluble substance from water is...
 19. The liquid the solute is put in is the...

21. When a mixture includes particles too small to settle or separate by filtration, it is called a...
 22. If you heat a substance it will...
 24. A way of separating colours is...
 25. Pure water can be formed using...
 26. A separating mixture that begins with 'd' and is used for separating an insoluble substance, it is called

Down

1. When a solute is able to dissolve into the solvent, we call it...
 2. Two substances mixed together is called a....
 4. When the insoluble substances sinks to the bottom it is called a...
 6. Spinning a mixture at rapid speed to separate it is called...

8. When you shake a bottle of sand and water what will be created?
 11. When the Insoluble substance floats on the top it is called a...
 13. A way of taking apart two substances mixed together is _____ them.
 14. The final product of the solute and the solvent is the...
 15. All substances are made of these little things
 16. A state of matter where the attraction is weak
 20. When more solute is dissolved in a solvent, it is said to be more...
 23. A state of matter where the attraction is strong
