# Science in the Fifth Day of Creation

## Across

- 3. used to propel a fish through the water
- 6. being pushed along by forcing a stream of air or a fluid in the opposite direction
- 11. an animal that has a backbone
- 13. anything alive
- 16. an animal that is eaten by another animal
- 17. the tendency of a solvent to flow across a semipermeable membrane to where there is more solute

- 18. a way for fish to get their oxygen
  - 19. an inflatable sack in a fish that allows it to change its volume so as to change its depth
- ## Down
- 1. the act of grouping things together based on their similarities
  - 2. An animal that lives in water that has a low level of salt in it
  - 4. animals without a backbone
  - 5. used to compare differences and similarities of 2 things

- 7. fins on the underside of the fish near the rear used to keep the fish rightside up in the water
- 8. an animal that eats another animal
- 9. moving atoms and molecules from high concentration to low concentration
- 10. some fish use this fin for protection
- 12. a thin layer of tissue
- 14. system of support in an animal
- 15. A chemical that reacts with bases
