Across

1. Complex organic substance present in living cells especially DNA or RNA

10. A molecule that can be bonded to other identical molecules to form a polymer

11. Substance produced by a living organism which acts as a catalyst to bring about a specific reaction

12. any of a class of organic compounds that are fatty acids or their derivatives are insoluble in water but soluble in organic solvents

13. substance that increases the rate of a chemical reaction without going through any permanent chemical change

14. Simple organic compound containing both a carboxyl and Amino

15. Any of the class of sugars that can't be hydrolyzed to give a simpler sugar

16. Minimum quantity of energy which the reacting species must possess

Down

2. the tendency of dissimilar particles or surfaces to cling to one another

3. Weak bond between 2 molecules

4. Essential nutrients for the human body

5. Region on an enzyme that binds to a protein or other substance during a reaction

6. a carboxylic acid consisting of a hydrocarbon chain and a terminal carboxyl group

7. Compound consisting of a nucleoside linked to a phosphate group

8. Any of the large group of organic compounds occurring in food and living tissues

9. action or fact of forming a united whole
