

Science words

Across

- 2. The first stage of cell division, before metaphase, during which the chromosomes become visible as paired chromatids.
- 6. The resting phase between successive mitotic divisions of a cell.
- 8. A cell biology mitosis is part of the cell cycle when replicated chromosomes into two separate nuclei.
- 9. The stage of mitotic cell division in which the chromosomes move away from each other.
- 10. The cytoplasmic division of a cell at the end of the stage mitosis.

Down

- 1. The second stage of cell division between prophase and anaphase.
- 3. Deoxyribonucleic acid is a molecule that carries the genetic instructions used in the growth development.
- 4. Ribonucleic acid is a polymeric molecules essential in various biological rules.
- 5. The final phase of cell division between anaphase and interphase.
- 7. It is a specialized cell division that reduces the chromosomes number by half.
