## **Sensory Receptor and Reflexes**

	_		_	_
_	c	ro	95	S

3	receptors	maintair
blood	pressure	

- 7. \_\_\_\_ receptors are slow adapting and fire rapidly when first activated then slow (stimulus must be present)
- 9. \_\_\_\_ receptors that respond to chemical ligands that bind to the receptor
- **10.** When the spindle is still active the muscle is at \_\_\_\_

11. Monosynaptic
reflex involves only the
<b>Sensory neuron and somatic</b>
motor neuron

- **12.** \_\_\_\_ spindles prevent you from overstretching a muscle or tear
- 13. Reflex with single synapse between the two neurons in the pathway

## **Down**

1. Touch, proprioception,
temperature and nociception
are examples of
senses

<b>2.</b>	_ receptors
are for soma	tic sense that
has a neuron	n with naked
	endings that are
	onnective tissu

<b>4.</b> :	receptors	s t	hat
detects	s change	in	osmotic
pressu	re		

- **5.** Single stimulus to affect multiple targets
- 6. Reflex with 3 or more neurons in the pathways
- 8. Integrates the input from multiple sources to modulate response
