## Sheila Lowry Kathleen Orr

## **Across**

- 5. to keep shears in excellent and reliable shape, important to clean and maintain shears on regular basis
- 7. used to make shears cut (twist)
- **8.** refered to as an all purpose comb. can be 6-8 inches long and has fine teeth at one end and wider teeth at the other
- **11.** Used when creating short haircuts, short tapers, fades and flat tops
- **12.** shear made by process of working metal to a finished shape by hammering or pressing
- 13. gives your pinky an additional contact point so nerves and tendons in the pinky and hand are less stressed, pressure is releaved
- **14.** Straight razor or feather blades are mainly used when a softer effect on the ends of the hair is desired

- 15. part of blade that does cutting
- **17.** shears made by processed where by molten steel is poured into a mold
- **18.** built in Japan, Germany, and United States, has a Rockwell hardness
- **19.** used for close tapers on nape or sides, when using scissors-over-comb technique
- **20.** Smaller versions of clippers and also known as edgers

## Down

- a rubber piece between thumb and finger hole so they don't hit and break
  Also known as scissors, are mainly used to do blunt cuts or straight lined hair
- 3. Used to remove bulk from the hair

- **4.** Come in various styles, shapes and sizes. can be metal or plastic, called jaw, butterfly, and duckbill
- 6. comb used to detangle hair
- 9. very sharp edge, smooth and quiet, glides through hair easily, great for all cuts
- **10.** not smooth, found on lower-quality shears, dull edged style
- **16.** Used mainly to section and subsection hair
