

# Skeletal System

## Across

3. An irregular meshing of small, bony plates that makes up spongy bone; it's spaces are filled with Red Marrow
8. The part of the skeleton that consists of the head, vertebral column, ribs, and sternum
9. The lighter-weight portion of a bone, which is made up of trabecula
10. Round bones that often are embedded in tendons and joint capsules. The largest of these is the patella.
11. Another word for joint, the structure created when bones connect to each other

## Down

1. The smooth, hard portion of bone that surrounds spongy bone and helps provide the firm framework of the body
2. A tough, flexible connective tissue that is softer than bone
4. A thin membrane of connective tissue that lines the marrow cavity of a bone
5. The thin membrane of connective tissue that covers bones except at articulations
6. The foramen that the spinal cord goes through
7. The part of the skeleton composed of the limbs and their attachments
