

Skeletal System 7

Across

- 3.** articulate with the tibia
5. lies alongside the tibia
10. separates the greater lesser trochanter anteriorly
12. anterior surface of the tibia is sharp ridge
16. thigh bone
18. forms outer part of the ankle
19. ilium, ischium, and pubis fuse at the deep socket
20. pubis bone or ___
21. separates lateral medial condyles posteriorly
22. superior to the true pelvis

- 24.** located on shaft serves as sites for muscle attachment
25. a roughened area of the tibial surface
26. separates the greater lesser trochanter posteriorly

Down

- 1.** articulate with the fibia
2. inferior to the opening of the pelvis
4. separates anterior by the introchanters line
6. forms a joint w/ patella
7. the bone of the tibia and fibia

- 8.** an opening that allows blood vessels to pass the anterior part of the thigh
9. allows blood vessels to pass from the pelvis in to the thigh posteriorly
11. pubic bones of each hip bone fuse ateriorly to form a cartilagious joint
13. lies inferior to the false pelvis
14. forms the inner bulge of the ankle
15. made up of tarsal metatarsals and phalanges
17. superior opening of the pelvis
23. shinbone
