

Skull and Face

Across

3. This bodily fluid is clear and amber in color?
 4. Which part of the brain is responsible for equilibrium, muscle action, and some reflexes?
 6. Which bone forms the anterior aspect of the skull?
 7. Projecting portion of the external ear
 10. Occurs when the head receives a blow. Upon impact, the brain "sloshes" to the side opposite the blow, where it is stopped by the skull, and that is where the injury of the brain occurs.
 12. Which bone forms the posterior aspect of the skull?
 14. Bone also known as cheek bone?
 15. Bone of the upper jaw?

16. Which degree of concussion is described as athlete losing consciousness?
 17. Which bone of the skull is the thinnest?
 18. Only moveable bone of the face?
 20. What is a major purpose of the skull?
 21. Primary muscle responsible for chewing?
 22. Occurs when an athlete receives more than one concussion or blow to the head in a relatively short time period.

Down

1. Which injury is described as severe bleeding within the brain caused by a blow to the head, particularly over the temporal or parietal regions.

2. A form of protection which helps prevent head injury.
 5. Kissing muscle
 8. Contractile colored portion of the eye
 9. Temporary impairment of brain function caused by impact to the head or by a rotation force.
 11. This muscle is responsible for elevation of the ears and mandible
 13. This muscle is responsible for raising of the eye brows
 19. Until what age do brain cells continue to grow and develop?
