3. a meticulous analysis of the details of conversation, based on a complete transcript that includes pauses, hems and haws

6. in grounded theory, this builds on the results of open coding and axial coding to identify the central concept that organizes the other concepts that have been identified in a body of textual materials

9. a component of the grounded theory method in which observations are compared with one another and with the evolving inductive theory

11. the document used in data processing and analysis that tells the location of different data items in a data file

12. the study of signs and the meanings associated with them, 'the science of signs'

14. a variable whose attributes are separate from one another or discontinuous, such as gender or religious affiliation

15. a description of the number of times the various attributes of a variable are observed in a sample

Down

1. an inductive approach to research in which theories are generated solely from an examination of data rather than being derived deductively

2. the analysis of a single variable, for purposes of description

4. statistical computations describing either the characteristics of a sample or the relationship among variables in a sample

5. the graphic display of concepts and their interrelations, useful in the formulation of a theory

7. a reanalysis of the results of open coding in the grounded theory, aimed at identifying the important, general concepts

8. a variable whose attributes form a steady progression, such as age or income

10. the initial classification and labeling of concepts in qualitative data analysis

13. writing memos that become part of the data for analysis in qualitative research such as grounded theory
