

# Social Work in Health Care

## Across

1. Social workers who stay in hospital work have a higher level of \_\_\_\_\_ of the hospital experience.

5. Substance use is viewed as existing along a \_\_\_\_\_, no longer dichotomies into separate categories of dependence and abuse.

11. Supervision and team support are two forms of \_\_\_\_\_ factors, making stress and burnout less probable.

12. Coordinating interdisciplinary services to a specified client, group or population is referred to as case \_\_\_\_\_?

13. What is the only constant in Health Care field?

14. Social workers tend to underreport incidents of client \_\_\_\_\_.

15. This is defined as a state of complete physical, mental and social wellbeing and not merely the absence of disease or infirmity.

16. \_\_\_\_\_ fatigue reduces our capacity or interest in bearing the suffering of others.

## Down

2. \_\_\_\_\_ planning continues to be the primary role for hospital social workers.

3. As \_\_\_\_\_ of hospital departments took place, an erosion of social work supervision was noted.

4. The basic goal of social work is to facilitate social \_\_\_\_\_ of the person-in-environment.

6. The extent to which the social worker can distance herself/himself from the ongoing misery of the client between sessions.

7. Several studies have shown that \_\_\_\_\_-based stress reduction is associated with improvements in wellbeing, emotional exhaustion, and burnout.

8. The amount of work-related independence, initiative and freedom either permitted or required in daily work activities.

9. Social work uses \_\_\_\_\_ as the basis of all interventions.

10. The three levels of health care include prevention, \_\_\_\_\_ and rehabilitation.
