# Solutions

## Across

2. a solution made of two or more substances

6. release heat

8. process when neutral molecules gain or lose electrons

9. example of a solution (gas)

10. a factor that affects the rate of dissolving

11. process in which a compound separates into ions

12. a substance that is dissolved in solution

13. temperature at which a liquid boils and turns to a vapor

## Down

1. substance that does the dissolving

3. a solutions' ability to allow the flow of electricity

4. the temperature at which a liquid turns to a solid

5. absorb heat

7. the breaking into small pieces that spread throughout
