# Space

## Across

- 2. an object made of rock, ice, dust and gas that revolves around the sun.
- 4. a system of planets and other bodies that orbit a star.
- 8. a large object in space that is made of gas and produces its own light.
- 10. a large body in space that orbits a star and does not produce its own light.
- 11. the motion of one object around another object.

## Down

- 1. half of the earth (i.e., Northern, Southern, Eastern, Western).
- 3. the turning of an object on its axis.
- 5. a natural object that orbits a planet.
- 6. the path of one object in space around another object.
- 7. a rocky or metallic object that orbits the sun and is much smaller than a planet.
- 9. a group of billions of stars, objects that orbit those stars, gas, and dust.
