

Space

Across

2. a celestial body moving in an elliptical orbit around the a star

5. a small body of matter from outer space that enters the earth's atmosphere appearing as a streak of light

8. of or from outside the earth or atmosphere

9. a region of space having a gravitational field so intense that no matter or radiation can escape

10. closest planet to the sun

14. the sixth planet from the sun

16. second planet from the sun

17. an intense and sudden episode of star formation in a galaxy

19. a large artificial satellite used as long-term base for manned operations in space

20. an artificial body placed in orbit around the earth or moon to collect information

22. eight planet from the sun

23. once the ninth planet from the sun

25. a small, rapidly moving meteor burning up on entering earth's atmosphere

Down

1. a meteor that survives its passage through the earth's atmosphere such that part of it strikes the ground

3. The galaxy that contains our Solar System

4. A fixed luminous point in the night sky that is large, remote incandescent body like sun

6. is used to estimate the number of communicating civilizations in the cosmos

7. the envelope of gases surrounding the earth or another planet

11. the seventh planet from the sun

12. fourth planet from the sun

13. the star around the which the earth orbits

15. fifth planet from the sun

18. an easily recognized group of stars that appear to be located close together in the sky and that form a picture

21. third planet from the sun

24. the natural satellite of the earth, visible by the reflected light from the sun
