Space TN READY Review

Across

5. A large planet of relatively low density
8. A object in space that floats around in space like a pink fluffy unicorn
10. A type of astronomical object consisting of a luminous spheroid of plasma held together
12. An interstellar cloud of dust
14. The largest known structures in the universe
15. An extremely luminous active galactic nucleus
16. A spherical collection of stars that orbit a galactic core

17. A star that suddenly increases brightly

19. galaxies whose gravitational fields result in a disturbance of one another

20. A constellation that sound like "Unicorn" but it's not

Down

1. Aggregation of gaaxies comprising

2. An object in space

3. Structer that consists of anywhere

4. Cosmic voids are vast spaces between filaments

6. A smaller companion galaxy that traves on bound orbits within the gravitational potential of a more massive and luminous host galaxy

7. A constellation that refers to the big dipper but is not called the big dipper

9. A group of up to a few thousand stars

11. The biggest and brightest star in the universe

13. What is on the other side of Earth's Atmosphere

18. A planet that is the 5th planet from the sun
