Name: _____   Date: _____

Special Angle Pairs, Parallel Lines and Traversal

Across

7. 2 lines that intersect to form right angles

8. angles that share a side and a vertex (next to each other)

9. 2 or more angles that add to 90

10. if two parallel lines are intercested by a transversal, then same side interior angles are supplementary

Down

1. Lines that are in the same plan and do not intersect

2. a line that intersects two or more co-planar lines at different points

3. A ray that divides an angle into two congruent angles

4. 2 angles that are supplementary and adjacent

5. 2 or more angles that add to 180

6. 2 angles that have the exact same measure
