

# Statistics Vocabulary: Chapter 1

## Across

3. Numerical description of a population  
 5. Data level where a zero entry represents a position on a scale  
 8. Method of data collection that allows you to study experiments that are too dangerous or impractical  
 10. Consists of numerical measurements and counts  
 12. Data level that is similar to the Interval level but the zero is an inherent zero

13. The subset of a population  
 14. the science of collecting, analyzing and organizing data to make decisions  
 15. Consists of attributes, labels and nonnumerical entries

## Down

1. Method of data collection used to observe and measure characteristics of a population  
 2. Data level that can be arranged in order or ranked

4. The collection of outcomes, measurements and responses that are of interest  
 6. Numerical description of a sample  
 7. Data level that is categorized using names, labels or qualities  
 9. Method of data collecting that investigates one or more characteristics of a population  
 11. Method of data collection where a treatment is applied to a population and the responses are observed
