

Surgical Radiography

Across

2. Using fluoroscopic procedure to find an exact location
 3. Surgical placement of a pace-making device
 5. Alignment of a fracture
 6. Procedure to aid in chest line placement
 7. Procedure inserting a nail into the tibia
 9. Free from bacteria and other living microorganisms
 15. Image taken with the tube facing the anterior surface of the patient
 16. Surgical placement of metal rod into medullary cavity of bone
 19. Changes X-ray beam into visible image
 20. Place where surgical procedures take place
 21. Protective wear for hands
 22. Surgical replacement of an entire hip
 23. Placing pin(s) into the pelvis

25. Chemical element (pb) used to protect people from radiation
 28. Minimally invasive type of surgery
 30. Used to protect against airborne illnesses
 31. Surgical extraction of stones/calculifications
 33. Attire worn by all surgical staff
 35. Type of imaging used during surgery
 36. Replacement of the entire knee joint
 38. Person operating the imaging unit
 39. Surgical procedure to remove bony/disk fragments from spine
 40. Procedure in which surgical instruments are guided into the brain
- Down**
1. Surgical fusion of one vertebra to another
 4. Surgical placement of tubular support
 8. Visualization of blood vessels within the tibia

10. Procedure inserting a nail into the longest bone in the body
 11. Visualization of renal pelvis and urinary tract
 12. External device holding bones in place
 13. Surgical cutting/removal of bone
 14. Imaging of bile ducts
 17. Stone fragmentation commonly done by laser or ultrasound
 18. Visualization of blood vessels within the femur
 24. Image taken with the tube facing the posterior surface of the patient
 26. Internal placement to hold bones in place
 27. Surgical removal of lamina
 29. Separation between sterile and non-sterile areas
 32. Raised flat surface where patient lays
 34. Person performing the procedure
 37. Device used to take live x-rays during a procedure
