

Systems of Equations

Across

- 3. A method for solving a system of linear equations in which the equivalent expression of a variable is substituted for that variable into the other equation.
- 4. Two lines that are co-planar and never intersect.
- 6. Two lines cross at a point.
- 8. Method of solving a system in which two equations are added together in a manner that will eliminate one of the two variables
- 9. number multiplied by variable

10. An inequality that when graphed will form a line that divides the coordinate plane into a shaded region and unshaded region.

Down

- 1. An equation that when graphed will form a line.
- 2. The point of intersection for a system of equations.
- 5. Two lines that are co-planar and intersect to form four right angles.
- 7. The rate at which the y value of a linear function rises or falls as x increases.
