# Terms of Geometry

## Across

- 3.** A triangle in which all three sides are equal.  
**12.** Any shape with exactly three sides and three angles.  
**15.** Two angles on the inside of the two lines but opposite sides of the transversal.  
**17.** Identical in form.  
**18.** A long, narrow mark.  
**19.** An angle that is exactly 90 degrees.  
**20.** Intersecting a system of lines.

## Down

- 1.** A shape with four equal sides and four right angles.  
**2.** An angle that is less than 90 degrees.  
**4.** These types of lines intersect to create a right angle.  
**5.** Two angles with a common vertex and side.  
**6.** The boundary of a shape (mainly a circle).  
**7.** A shape with at least three straight sides.  
**8.** A small portion of a line.

- 9.** A quadrilateral only having one pair of parallel sides.  
**10.** A rectilinear quadrilateral with opposite sides parallel.  
**11.** The line that passes through the center of a shape or form.  
**13.** A triangle that contains a right angle.  
**14.** A straight line going from the center of a circle/sphere to the edge of it.  
**16.** Straight lines passing through a point.
