

Terms of Unit 1 Science

Across

- 5. The amount of _____ is the same amount of protons.
- 11. _____ is anything that has mass or volume.
- 14. _____ is how much space an object takes up.
- 15. Water's boiling point can turn it into a _____?
- 17. How many _____ an element has is the same as the atomic number.
- 18. A _____ does not have to be two or more of the same atoms.
- 19. Mass divided by volume equals _____.

20. A _____ has to be two or more different atoms combined together.

Down

- 1. Highly reactive and lowly reactive are how much _____ an element has.
- 2. _____ are located at the right of the Metalloids on the Periodic Table.
- 3. Subtracting the atomic number from the atomic mass will get the answer to how many _____ is in an element.
- 4. _____ is a chemical property.

6. A _____ has a definite volume but no definite shape.

- 7. A _____ can only have the same mixtures or compounds.
- 8. _____ are located on the left of the Metalloids on the Periodic Table.
- 9. All matter is made of _____?
- 10. _____ is how much is in the inside of an object.
- 12. What is located on the Periodic Table?
- 13. Stars are in example of _____?
- 16. A _____ has a definite volume and a definite shape.
