

# The Awesome DNA Crossword

**Across**

- 6. What Type of RNA that carries copies of instruction for the assembly of amino acids into proteins from DNA to the rest of the cell ?
- 8. What Synthesis of an RNA molecule from a DNA template Called?
- 10. What Cell organelle consisting of RNA & protein found throughout the cytoplasm in a cell called?

**Down**

- 1. What Genetic code puts together proteins in the cell called ?
- 2. What Type of RNA that carries each amino acid to a ribosome during protein synthesis called?

- 3. Which of the sequence of bases of an m RNA is converted into the sequence of amino acid of a protein ?
- 4. What kind of Process copies the DNA prior to the cell division ?
- 5. What Principle bonds in the DNA that can form only between adenine & thymine & between guanine & cytosine called?
- 7. What is Genetic information called?
- 9. What Act messenger carries the instructions from the DNA to control the synthesis of proteins called ?
