

The Brain

Across

2. which centre in the medulla oblongata controls rate and depth of breathing
 3. Which part of the brain deals with higher function
 8. Which part of the brain deals with physiological processes
 10. which nervous system is the brain part of
 11. How many hemispheres is the cerebrum made up of

12. lobe of the endocrine gland that produces its own hormones

13. what connects the cerebrum and cerebellum

14. which centre in the medulla oblongata controls heart rate

15. which section of the brain contains over half of the brains neurones

Down

1. maintenance of water levels in blood controlled by endocrine gland

4. What part of the brain controls homeostatic mechanisms

5. whats the outer layer of cells of the cerebrum called

6. Which endocrine gland is in your brain

7. Which part of the brain helps to coordinate balance and fine movements

9. the cerebellum is involved with _____ control (learnt and then becomes second nature)
