

The Earth's Shape and it's Layers

Across

- 2.** Which element is the most present in the Earth's crust?
- 3.** The thinnest, and outermost layer of the Earth
- 9.** The layers deeper in the Earth are _____ than the layers closer to the surface
- 10.** Contains the deepest part of the ocean, called the Challenger Deep

11. What is Earth's shape?

12. Assumption that geologic processes occurring today have been the same through geologic history

13. What is the highest of the Himalayan peaks?

Down

1. There are two types of materials that broadly compose the Earth's crust; Oceanic crust and _____

4. What is the only liquid layer of Earth

5. What is the name of the volcano that, due to the Earth's shape, has a peak that is the furthest away from the equator?

6. The innermost layer of the Earth

7. The study of Earth's size and shape

8. 94% of the inner core's composition
