

The Hydrosphere

Across

- 2. The effect that causes currents in the northern hemisphere to turn clockwise and those in the southern hemisphere to turn counter-clockwise
- 5. All the water on and in the world
- 6. a continuous movement of sea water in the ocean similar to a river
- 8. The amount of salt in the water
- 9. A large system of circulating ocean currents

- 10. Swirling loops of water created by surface currents

Down

- 1. Type of current influenced by the wind
- 3. A vertical circulation in the ocean that brings deep, cold water to the surface
- 4. Type of current influenced by water density and salinity
- 7. 97% of all water
