

Name: _____

The Immune System

Across

3. Lymphocytes that produce proteins that help destroy pathogens.
6. The body's first line of defense
7. A cell that identifies pathogens and distinguishes different pathogens from each other.
9. The body's ability to destroy pathogens before they can cause disease.
10. A chemical that kills bacteria or slows their growth without harming cells.
11. An imbalance or misuse of insulin in the body.

Down

1. The process by which harmless antigens are purposefully introduced to a person's body to produce active immunity.
2. A disorder in which the immune system is overly sensitive to a foreign substance
4. The proteins produced by B Cells.
5. A disorder in which respiratory passages narrow significantly.
8. The molecules that the immune system recognizes as either part of the body or coming from outside the body
