# The Periodic Table

- |   |              |
|---|--------------|
| 1. The simplest element                             | A. Nitrogen  |
| 2. Has a nucleus with two protons and two neutrons. | B. Potassium |
| 3. Has an atomic number of 3.                       | C. Sodium    |
| 4. Has a mass number of 9.                          | D. Boron     |
| 5. Has an atomic number of 5.                       | E. Helium    |
| 6. Has 6 neutrons in its nucleus.                   | F. Argon     |
| 7. Has 7 neutrons in its nucleus.                   | G. Aluminium |
| 8. A gas we breath in.                              | H. Carbon    |
| 9. A poison put in toothpaste.                      | I. Oxygen    |
| 10. Used in display lighting.                       | J. Phosporus |
| 11. Found in salt.                                  | K. Hydrogen  |
| 12. A metal which burns with a very bright flame.   | L. Lithium   |
| 13. A light strong metal.                           | M. Sulphur   |
| 14. Used to make glass.                             | N. Calcium   |
| 15. Has an atomic number of 15                      | O. Fluorine. |
| 16. Has a mass number of 32.                        | P. Magnesium |
| 17. A visible poisonous gas.                        | Q. Neon      |
| 18. Has 22 neutrons in its nucleus.                 | R. Beryllium |
| 19. An alkali metal which catches fire in water.    | S. Chlorine  |
| 20. Needed for bones and teeth.                     | T. Silicon   |
