

The Plant and Animal Cell

Across

7. This is used to store food and water in a plant cell.

10. Example of plant cell used in our experiment to view a plant cell under the microscope.

11. This controls what enters and leaves the cell.

12. This is used to protect plant cells and keep their shape.

14. We cannot see cells because they are..

Down

1. This is the stain used to view animal cells.

2. This is used to hold all organelles in place.

3. This is the part of the microscope you look through.

4. This is present in both plant and animal cells, it makes protein.

5. The power house in both plant and animal cells.

6. This is the stain used to view plant cells.

8. This is used in the experiment to view cells under the microscope to protect the cell.

9. This is responsible for photosynthesis in the plant cell.

13. This is the brain in both types of cells.

15. Example of animal cell in our experiment to view an animal cell under the microscope.
