

The Rock Cycle

Across

5. movement of soil, rock, or dissolved material from one place to another by natural forces

8. pieces of rocks, minerals, and remains of living things are types of this

9. magma that reaches Earth's surface

10. constant changing in the form and structure of rocks

Down

1. rocks formed from quickly cooled lava

2. rock that has been changed by pressure and heat

3. rocks that are formed by the compacting of sediment

4. solid earth materials formed from a mixture of minerals

6. rocks formed from slowly cooled lava

7. when magma or lava cools it becomes this
