

The Rock Cycle Vocab

Across

- 6. a very light and porous volcanic rock formed when a gas-rich froth of glassy lava solidifies rapidly.
- 7. a coarse-grained metamorphic rock which consists of layers of different minerals and can be split into thin irregular plates
- 8. The process by which sediment settles out of the water or wind that is carrying it.

- 9. a hard crystalline metamorphic form of limestone, typically white with mottlings or streaks of color, that is capable of taking a polish and is used in sculpture and architecture
 - 11. type of igneous rock that cools from magma
 - 12. molten rock under the earth's surface
 - 13. 1 of the major rock groups (sedimentary, igneous, _____)
- Down**

- 2. A type of rock that forms when particles (sediments) from other rocks are pressed together
- 3. the process that forms metamorphic rocks
- 4. What is the name of the processes that loosens and discolours rock faces without removing grains?
- 5. the cycle that rocks go through
- 10. magma on the surface

- 1. The destructive process in which water or wind loosen and carry away fragments of rocks.
