# Theory of plate tectonic

## **Across**

- 2.** Land formed by convergent continental plates coming together
- 5.** Type of fault caused by shearing very common transform plate boundaries
- 7.** Type of plate boundary that typically forms a ridge from two plates moving opposite of each other
- 9.** Land formed by two divergent plates moving opposite of each other

## **10.** Pieces of the earth's lithosphere that move in relation to each other

- 11.** Landform formed by convergent continental and oceanic plates coming together
- 12.** Type of fault caused by compression, very common at convergent plate boundary
- 13.** Earth's second innermost layer only liquid layer and composed of mostly iron and nickel

## **Down**

- 1.** Land formed by two transform plates sliding horizontal past each other
- 3.** Types of plate boundary that forms from two plates coming together
- 4.** Landform formed by two convergent oceanic plates coming together
- 6.** Earth's outer layer, the thinnest layer
- 8.** Earth's innermost layer solid and composed of mostly iron and nickel
