# Tide Types

## Across

- 2. Harmful algal bloom, toxic to people, fish, shellfish, marine mammals and birds
- 4. highest level of tide
- 7. Only one high tide and one low tide per day
- 10. Unlike most other algal blooms because of its unusually high concentrations, Unappealing but not harmful to humans
- 11. Lowest level of tide

## Down

- 1. Two high tides and two low tides in the same day
- 3. When the moon, earth and sun fall in a straight line, the greatest difference in high and low tides.
- 5. When the sun and moon are at a right angle, a small difference between high and low tides
- 6. Single low tide follows two high tides
- 8. A strong channel of water flowing seaward from near the shore
- 9. A wave of water travels up a river against the direction of the current
